

Traceability to Plantations

PT Oleochem & Soap Industri (OSI), as an oleo chemical facility, we rely on our supplying refineries to obtain their own traceability to the plantation data. On receiving the data from our supplying refineries, we will calculate the percentage of traceability based on the volume supplied to OSI.

For 2021, OSI did not source CPO based products. Our 2021 volume comprises of CPKO based products in which our traceability to plantations for CPKO will commence in 2023.
