

## **Traceability to Plantations**

For PIL as a trading concern, we rely on our supplying refineries to obtain their own traceability to the plantation data. On receiving the data from our suppliers, we will calculate the percentage of traceability based on the volume supplied to PIL.

For 2021, PIL is 52.26% traceable to plantations. PIL Group which comprises of our sister refineries and oleo chemical facility is 34.98% traceable to plantation.

For specific traceability to the plantation of our internal supply chain please refer to their respective website.
