

At Pacific Inter-Link (PIL), Traceability to Plantation (TTP) is assessed through two key indicators:

1. **Volume of FFB Origin** – Refers to the source of Fresh Fruit Bunches (FFB) processed at third-party supplying mills, categorised as directly managed plantations, third-party plantations, or a combination of both.
2. **Percentage of Traceability to Plantation (TTP)** – Represents the proportion of the total supply volume that can be traced back to the plantation level, expressed as a percentage.
